

The flow, expanded

Insidor watches TikTok and X for things going viral, tells you before crypto traders find out, shows you the coins people are making out of them, and lets you make the first one if nobody has.

This is the document the interface gets rebuilt from. **Every screen has a named way in and a named way out.** Nothing here is infrastructure — that stays deferred.

01

Why nothing correlated

One structural bug explains every symptom.

ROOT CAUSE

The story and the coin are the same record

In every version so far, a viral post *is* a ticker. One object, one row, one card. That single decision is why the features would not connect:

- There is **nowhere to put a second coin**, so “Buy \$FERRY” had to pretend only one exists.
- There is **nowhere to put you** — no holding, no position — so the product ended at the purchase.
- There is **nowhere to put what happened afterwards**, so nothing could prove it works.

Split story from coin and the rest falls out on its own. A story is the spine. Coins hang off it, and so do you.

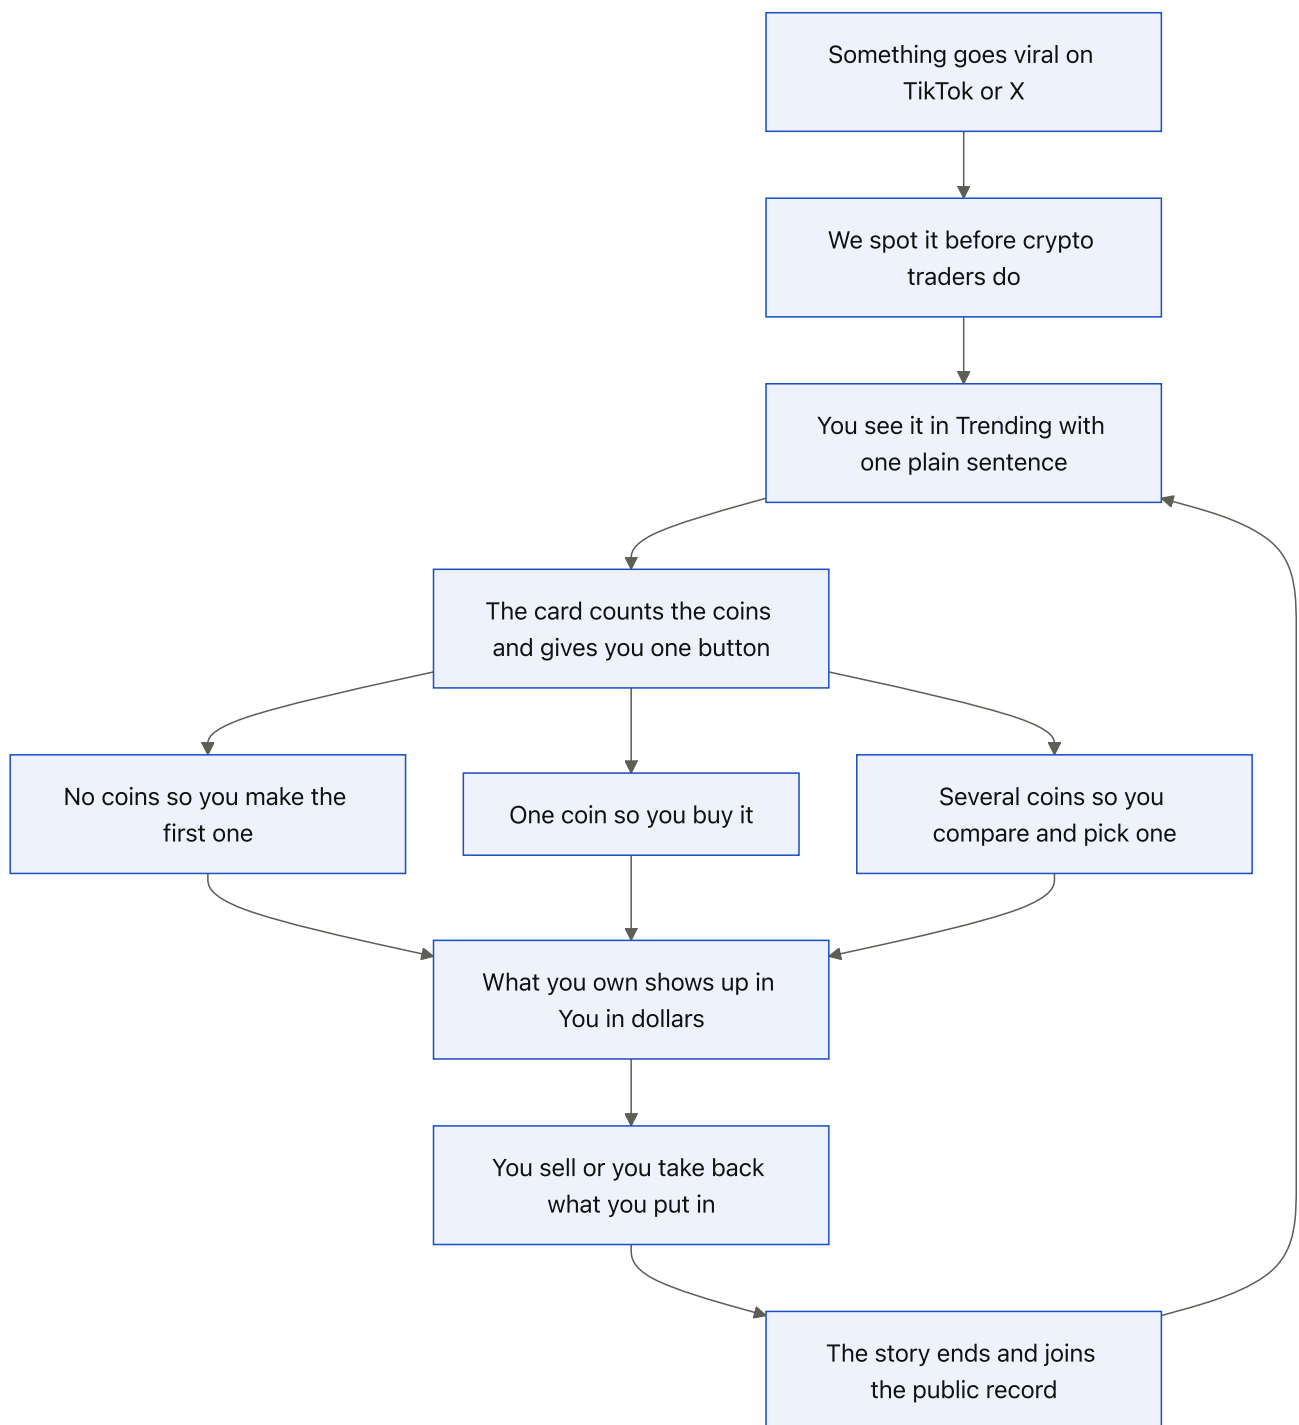

Everything below is downstream of that one split. The navigation gets simpler, not more complicated, because objects now have somewhere to live.

02

The loop

One path through the product. Everything else is a branch off this.

CORE LOOP

THE RULE THAT REMOVES THE AMBIGUITY

The card's button is a pure function of how many coins exist. Zero → Make the coin. Exactly one → Buy \$FERRY. Two or more → See the 3 coins. No card in the app can say “Buy” when more than one coin exists — not because the copy is careful, but because that state cannot be rendered.

03

Eight objects

Nothing else exists. If a feature does not touch one of these, it does not ship.

OBJECT	IN PLAIN ENGLISH	RELATIONSHIPS	WHERE YOU SEE IT
Story	A thing going viral right now that people might make a coin out of.	1 post, 1 poster, 0–n coins , 0–1 main coin	Trending card, Story page, Search, the band on every coin page, Following
Post	The actual video or tweet it came from.	belongs to 1 story	Card hero, Story page timeline. Its permalink is the proof — the lead-time claim is unfalsifiable without it.
Poster	The person who posted it. They get a cut whether they know it or not.	1 → n stories	Card byline, Story page, the claim page — which is their entire product
Coin	A coin somebody made out of a story. There can be more than one.	n → 1 story , 1 maker, 0–n holdings	Coin page, story's coin list, Search, Live rail, You
Follow	You told us to keep an eye on something.	targets a story or a coin — never silently converts	You → Following. Nine feeders , which fixes the empty watchlist.
Holding	What you own, what you paid, how you are doing.	1 coin, 1 story	You → What you own, the position block on a coin page, the sell sheet
Launch	A coin you made.	1 coin	You → What you made, plus a live earnings band on the coin page
Payout	Money a coin owes somebody.	3 roles per coin: maker 50, poster 40, Insider 10	Create form, You, the claim page

THE NUMBER THAT CARRIES THE PRODUCT

minutes_early_when_you_bought exists on every holding and appears nowhere in any build so far: **"You got in 41 minutes before crypto traders did."** That is the emotional payload of the whole thing, and it is currently missing.

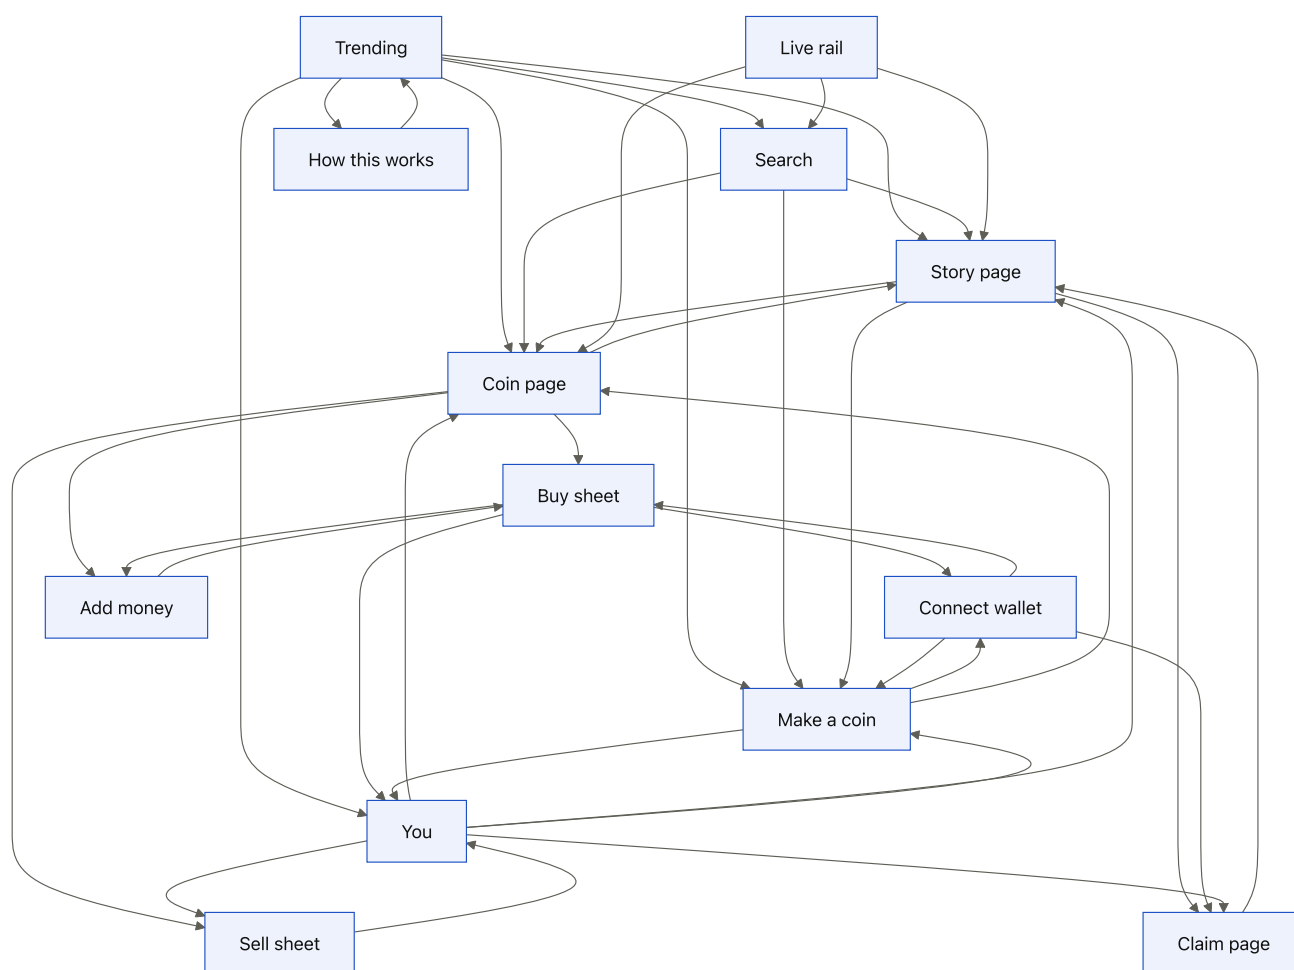

Note that minutes_early **can be negative, and we show it.** Roughly a third of real detections will be late. A track record with no left tail reads as marketing.

04

Three tabs

Down from five. A fourth tab costs 20% of the most valuable space in the app for a screen people visit once.

TAB	ITS ONE JOB	WHAT LIVES IN IT
Trending	See what is going viral and what to do about each one.	Story cards ordered by how fast they are spreading. A pinned <i>Does this actually work?</i> card at position two, always. A <i>While you were away</i> band on return visits.
Search	Find anything, browse what has no coin yet, read the honest record.	One box, four chips: No coin yet (your candidate-ticker table, with inline Make it), Just made (replaces New Pairs entirely), Trending now , Finished (the track record, misses included).
You	Everything that is yours, in one scroll, in dollars.	Money ready to claim · What you own · What you made · Following · Sold. Each section appears only when it has something. Every row names the story behind it.

05

Fourteen screens

Every one has at least one way in and one way out. Tap to expand.

Trending Show what is going viral and give exactly one obvious next action per story.

—

IN	Opening the app · the logo · the tab · back from any story or coin · a notification · every confirmation screen
OUT	Story page (card body) · Coin page (when exactly one coin) · Make a coin (when zero) · Search · How this works · the original post, external
SIMPLE	One big card per story: hero, byline, the post, then Why it is spreading in one sentence, then how many minutes early we were, then one button.
PRO	Same cards, same buttons, same order, half the height. Adds a posts-per-5-minutes sparkline and raw clock times.
EMPTY	Never blank. <i>"Quiet right now. We are watching."</i> plus an overnight recap and a Starting to move block.

Story page Settle which coin, if any — and prove we were early.

—

IN	Card body · See the N coins · the band on any coin page · a Search row · a Following row · a Sold row · the Live rail · a shared link
OUT	Any coin page · Make your own coin · Follow · the original post and the first crypto post, both external · the claim page
SIMPLE	The post embedded and playable. Then Where this came from — a four-mark timeline with the gaps written in minutes. Then the ranked coin list.
PRO	The coin list becomes a sortable table with money in it, traded today, owners, biggest-owner %, age.
EMPTY	<i>"Nobody has made a coin from this story. You would be first. It costs about 2 dollars and takes 30 seconds."</i>

Coin page Show one coin honestly. The only place you can buy or sell.

—

- IN A row in a story's coin list · a one-coin Trending card · Search · the Live rail · Following · What you own · the launch confirmation
- OUT **Story page, always**, via the band at the top · sideways strip to the other coins from the same story · Buy · Sell · Add money
- SIMPLE A band before anything else: *"Last Horn. We spotted this story 31 minutes before crypto traders did. This coin was made 2 minutes after we spotted it."* Then price, chart, safety in words.
- PRO Candles. The safety chip expands to the full checklist with the contract address. Full owner tables.
- EMPTY *"No trades yet. You would be the first person to buy this."*

Search Find anything, browse what has no coin, read the honest record.

—

- IN The tab · Cmd K · the pinned proof card · **Show me the ones with no coin** · **See all coins from this story** · the empty You
- OUT Story page · Coin page · Make a coin, inline · Follow
- SIMPLE One box, four chips with live counts. **No coin yet** is the default view and gets its own header.
- PRO Adds numeric columns and a column chooser.
- EMPTY *"Nothing called ferry yet."* → **Make the first \$FERRY coin**. The dead end becomes the best feature.

You Everything that is yours, in dollars, including how to get out.

—

- IN The tab · every confirmation · any *While you were away* row · an alert · the Money ready banner
- OUT Coin page · Story page from any row subtitle · Sell · Buy more · Make a coin · Get it (claims fees) · Add money
- SIMPLE Plain summary first: *"You have put in \$141.20. It is worth \$179.60. You are up \$38.40."* Dollars first, never a bare percentage as the headline.
- PRO Cost basis, average paid, realised vs unrealised split out, minutes-early per buy.
- EMPTY *"Nothing here yet. Tap Follow on any story and it shows up here. You do not need a wallet to do that."* Plus three real stories to follow.

Make a coin Two steps, with cost and fee split shown before you pay.

—

IN	Trending card with zero coins · story page · a No coin yet row · Make your own under an existing coin list · a Following row
OUT	Launch confirmation → the new coin page. It also appears in You, in the Live rail, and in that story's coin list for everyone.
SIMPLE	Step 1 name it — the story is fixed at the top and cannot be changed , so there is no way to make a coin out of nothing. Step 2 shows cost, split and safety before you pay.
PRO	Adds supply and exact fee-per-trade. Safety settings are not switchable in either mode.
EMPTY	Code taken: <i>"Someone made \$FERRY 40 seconds ago. See it, or pick a different name."</i> — a save, not a loss.

Buy sheet One number to a purchase, telling the truth about zero.

—

IN	Buy on a coin page · Buy more from a holding
OUT	Confirmation → coin page with the position block · Connect wallet or Add money, both returning here with the amount preserved
SIMPLE	A dollar field, quick buttons, <i>"You will get about 231,000 \$FERRY"</i> , and one always-present line in ordinary text, not a red box: <i>"If this goes to zero you lose \$50. That happens most of the time."</i>
PRO	Adds SOL/dollar toggle, slippage, priority fee, exact minimum received.
EMPTY	No wallet: a three-step explainer replaces the panel rather than blocking.

Sell sheet Get out in one tap, and say so when there is nobody to sell to.

—

IN	Sell on a coin page · Sell on a What you own row · Take back what I put in
OUT	Confirmation → You · See how this ended when the story is over
SIMPLE	25% / 50% / All of it, then a fourth on its own line: Take back what I put in — sells exactly enough to recover your original money and leaves the rest riding.
PRO	Slippage, exact minimum, realised vs unrealised.
EMPTY	N/A — only opens when you own something.

Claim page Convince someone who has never heard of crypto that this is real money and not a scam. —

IN A reply on their own post · a link the maker sends · the **It is yours** line on a story page · **typing the address directly**, which matters because the only trustworthy version is one they reach without clicking a stranger's link

OUT Claim my money → Connect wallet → paid · **I want this taken down** · See the story · What is Insider?

SIMPLE A calm standalone page, not the app. "\$49.50 is waiting for you." Their own thumbnail. No exclamation marks, no emoji, no congratulations — those read as a scam to exactly this reader.

PRO None. An expert never sees this page.

EMPTY Already claimed: shows what was sent, when, and what has accrued since.

Live rail Prove the app is alive, and send every row somewhere real. —

IN Present on every screen. On mobile, a bar above the tabs reading *Live, 12 just now*.

OUT **Every row has a destination** — this is the fix for it linking nowhere. Trades → that coin, scrolled to the trade, highlighted 2s. New coins → that coin with safety expanded. Going viral → that story. Each header has a **See all**.

SIMPLE One mode at a time: Trades / New coins / Going viral, in sentences — "*someone bought \$340 of \$FERRY, 4 seconds ago*".

PRO More rows, all three stacked, amounts and wallet fragments. Destinations do not change.

EMPTY Quiet minute, live dot still pulsing so it is obvious the connection is fine.

How this works Teach the five things the product silently assumes, in 90 seconds. —

IN A header link on every screen · a first-visit card · *Why does the price move when I buy?* · *What am I actually making?* · *What did you check?*

OUT One Back that returns you exactly where you were, **including a half-finished buy**

SIMPLE Five short sections, no diagrams: what we do, why minutes matter, what a coin is, what a wallet is, how we get paid.

PRO Identical. If an expert needs it, the Simple one is correct too.

EMPTY N/A.

Connect wallet Attach a wallet without ever holding a password.

—

IN First Buy · first Sell · first Make a coin · Claim my money

OUT Returns to the exact action that sent you here, everything preserved. Cancel loses nothing.

SIMPLE *"Your coins live there, not with us, and we cannot touch them."* Two buttons: I have one / I do not have one.

PRO Identical.

EMPTY *"You cancelled. No problem. Try again."* Never judgemental, never a dead end.

Add money Zero to able-to-buy, without Insidor touching a card.

—

IN Buy sheet when the balance is short · the empty You · the create form when the fee is unaffordable

OUT Returns to the exact buy or launch that sent you here, amount still filled in

SIMPLE Two choices, both handoffs. *"We never see your card details and we never handle the payment."*

PRO Adds network name and minimum.

EMPTY N/A — this screen exists because of an empty balance.

Takedown form A real way out for the person who filmed it, with an honest promise.

—

IN **I want this taken down** on the claim page

OUT Submitted → claim page with a confirmation band

SIMPLE Within one day we stop showing the coin anywhere on Insidor. **We cannot delete it from Solana and we say so.** Fees keep accruing for you. Anyone who already bought can still sell — stranding a holder would just move the unfairness onto someone else.

PRO None.

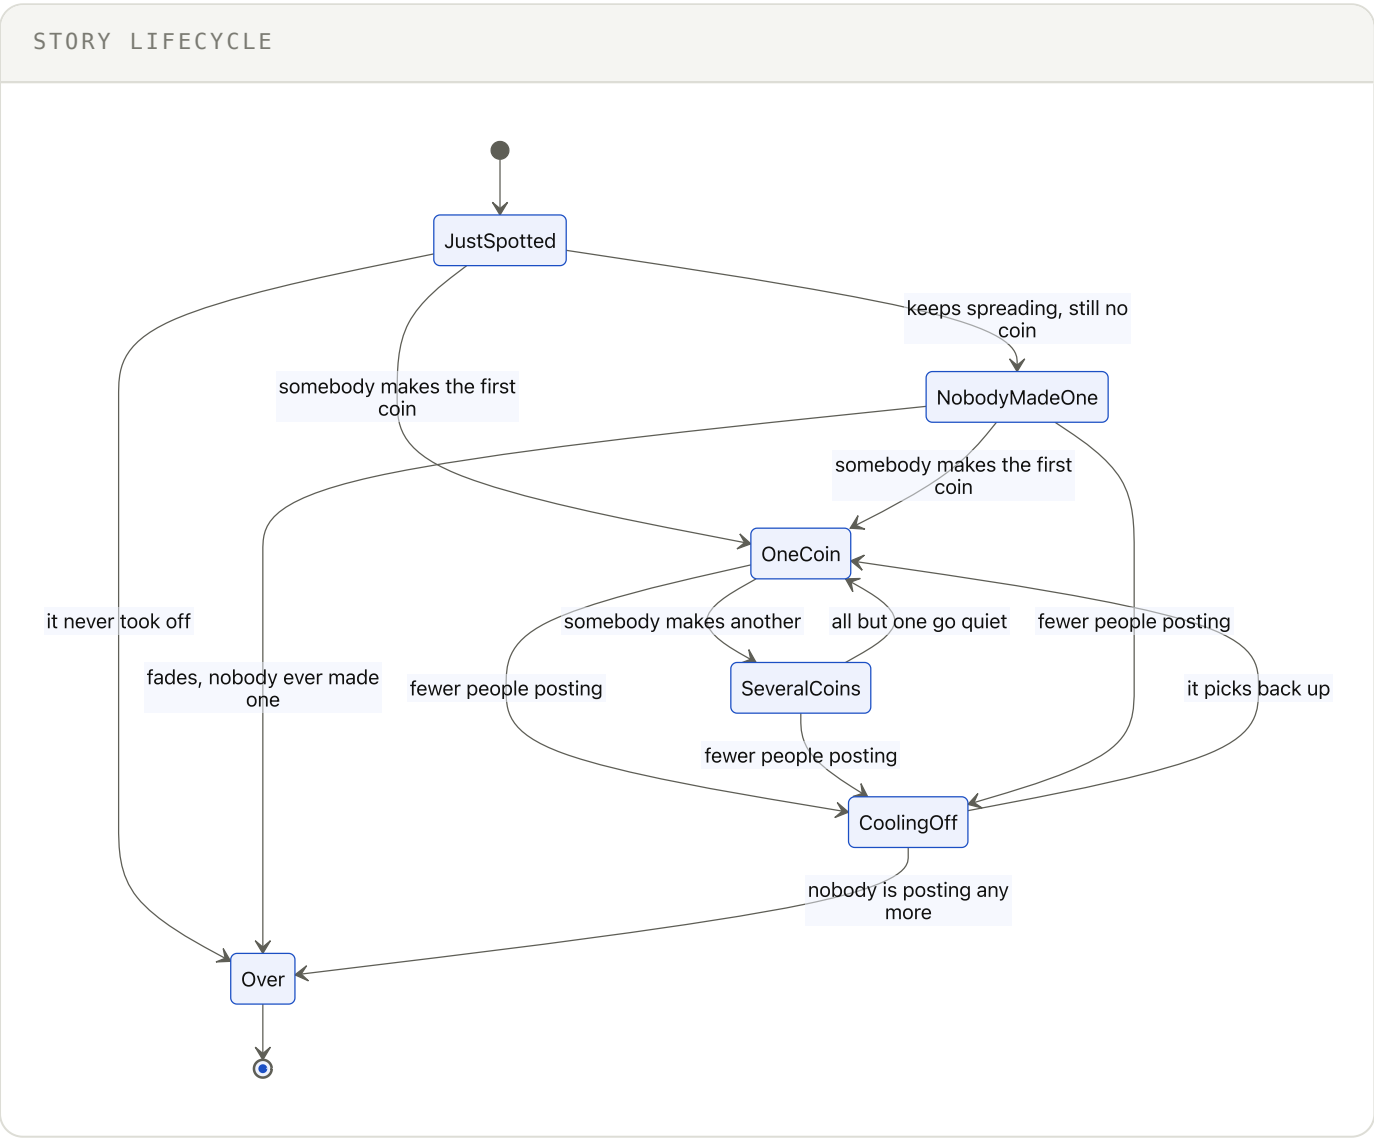

EMPTY N/A.

06

A story has four states

The prototype has one boolean, `hasCoin`. A screen cannot render what time it is if there is no clock.

STATE	THE WORDS THE USER SEES	WHAT CAUSES IT	WHAT THE CARD DOES
Just spotted	"Just spotted — nobody in crypto has posted about this yet"	Detected under 15 minutes ago	Full colour, accent line, sorts near the top
Spreading	"Spreading — more people are posting about it every minute"	Posts per 5 min rising, three checks in a row	Full colour, top of the feed
Cooling off	"Cooling off — fewer people are posting about it now"	Fallen below 60% of the busiest 5 min	Colour drains to ~65%, image shrinks to a thumbnail, sorts down, leaves after 2h
Over	"Over" plus one sentence on what happened	Below 15% of peak for a full hour	Leaves Trending. Appears under Finished in Search and in Following

The same four words render identically in six places: the Trending card, the Search row, the band on every coin page, the Following row, the What-you-own subtitle, and the Live rail. **A story that never got a coin is not hidden** — it becomes a Finished row reading *"Nobody ever made a coin from this one. Sometimes that is the right call."*

07

Seven journeys

If a screen is not reachable by one of these, it should not exist.

J1 Never bought anything — first three minutes

Lands on Trending from a friend's link. **No wallet box, no tour, no modal.** Header: *"Insidor watches the internet and tells you what is about to blow up. Right now: 412 stories, and we are catching them about 31 minutes before crypto traders do."* One card down: image, byline, post, *Why it is spreading*, minutes early, one button. The smallest first action is **Follow** — free, no wallet.

J2 Follow a story with no coin, come back when one exists

Follows from **No coin yet** in Search. Two hours later, Trending shows a *While you were away* band: *"1 story you follow got a coin. Wrong Name is now \$CUPS."* Lands on the coin page. The story follow **stays alive**, so it fires again if a second coin appears.

J3 Three coins exist — pick one

The card cannot say Buy. It says **See the 3 coins** and lands on the story page. Three ranked rows, top marked **BIGGEST**, each showing exactly three facts in the same order: money in it, people who own it, how long ago it was made — then the safety line in words. No market cap, no liquidity, no volume in Simple.

J4 Nobody made a coin, so you make the first

"Nobody has made a coin from this story. You would be first. It costs about 2 dollars and takes 30 seconds. You keep half the fees from every trade, forever." Two steps. The story is fixed at the top and cannot be changed.

J5 After the buy — check on it, then get out

The half of the product that does not exist today. *"You have put in \$141.20. It is worth \$179.60. You are up \$38.40."* Each row's subtitle is the thing no other trading app can say: **"Last Horn — the story is cooling off."** Sell / Buy more / See coin.

J6 The person who filmed the video

Has never heard of crypto. Gets a deliberately flat message: *"Someone made a coin based on your Norwegian cup video. You have earned \$49.50 from it so far. It is yours whether or not you do anything."* No exclamation marks, no emoji — those read as a scam to this reader.

J7 Coming back the next day

The order is the design: your money, your earnings, your follows, then the world. A dismissible band, not a modal and not a separate screen.

08

The correlation fixes

Each of these closes a specific hole you spotted.

FIX Buy is a function of a count. The ambiguous state is not resolved by copy — it cannot be rendered.

FIX Stories never buy. Coins buy. Buying happens in exactly two places: a coin page, and a row in What you own. Nowhere else.

FIX The main coin is the one with the most money in it. Not a weighted score — a rule you can say out loud in half a sentence. If the biggest is under 2× the second, we pick nothing and say so.

FIX We never say "pick" and never put Insider's name on a coin. The label is BIGGEST, which is a fact, with the rule printed underneath.

FIX Nine feeders into the watchlist, including automatic follows on every buy and every coin you make. Nothing you touch fails to appear in You.

FIX Every live-rail row has a named destination. Trades, new coins and viral posts each land somewhere specific, and each header has a See all.

FIX Lead time is one number owned by the story. Everything else is arithmetic on it, expressed in words. Three competing green minute chips was your complaint restated as a feature.

FIX The claim is verified by two public permalinks, not by trusting us — the original post and the first crypto post, both somebody else's timestamps.

FIX Being late is published in the same feed, in grey, in the same slot.
"Crypto traders got here 6 minutes before us."

FIX Following a story never silently becomes following a coin. Migrating it would destroy what you actually asked for.

09

Deliberately not building

The full design produced far too much product. These are cut on purpose, so they do not creep back.

CUT A fourth and fifth tab. Following became a section of You; the archive became a filter chip plus one pinned card.

CUT All onboarding. No welcome panels, no interest picker, no forced risk screen. You land on the feed. The proof card is item two.

CUT The alerts inbox. None of the seven journeys ever opened it. *While you were away* answers "what did I miss" better.

CUT Practice money. The most painful cut — it put fake money in the same list as real money, separated by a corner chip. Follow already gives a wallet-free action.

CUT The command palette. A search box wearing a keyboard shortcut. Cmd K now just focuses the search field.

CUT The weighted consensus score (40% liquidity / 30% volume / 20% holders...). Four proposals produced four incompatible formulas, which is proof the decision was not ready.

CUT Market cap, liquidity, volume, slippage, mint authority, LP, bonding curve, rug, bag — as words, in Simple mode. Every one appears in the current prototype. Pro may show the numbers; Simple never shows the vocabulary.

CUT Nine story states and eleven coin states. Twenty status words before a beginner has bought anything. Four and four.

CUT New Pairs as a destination. It was never a destination, it was a sort. It survives as a chip and a rail mode.

CUT Insider holding a non-crypto person's money. It contradicts the one sentence we tell everyone else: your coins live in your wallet, not with us.

CUT Buying your own coin ahead of everyone inside the create form. The one screen that would make a beginner correctly ask whether they are running a scam.

CUT Graduation badges and confetti. A celebration on an event a beginner cannot parse, contradicting the no-celebration rule the rest of the product depends on.

WHAT PRO MODE IS NOW

Exactly four things: adds numeric columns to tables, turns the chart into candles, expands the safety line into the full checklist, exposes slippage on the buy sheet. **It never moves a button, never adds a screen, and never shows a state Simple cannot see.**

10

Yours to decide

Real forks. I picked a default for each so the spec is complete, but these are product calls, not design calls.

? **Main coin = most money in it, or most owners?** I picked money, because it decides whether you can actually sell later.

? **Does Insider keep its 10% when the poster never claims their 40%?** Currently the poster's money sits untouched forever and we still take our cut.

? **Can anyone make a coin from any story, or only ones we detected?** Right now the form is only reachable from a story, which is what keeps creation coherent — but it also means you cannot make a coin about something we missed.

? **On a takedown, do we hide the coin only, or the story too?** I specced coin only, so the public record keeps its lead-time claim.

? **Does following require an account?** I assumed no sign-in, so a first visit can do something free — which means follows on a laptop are invisible on a phone.

? **Push notifications, ever?** Everything is in-app until the user opts in. Push is the strongest retention lever in a market that moves in minutes.

? **Does profit or loss ever appear in the Trending feed?** I kept money inside You and coin pages only.

? **Is 2x the right threshold for refusing to name a main coin?** Higher is more honest but leaves beginners stuck.
